03

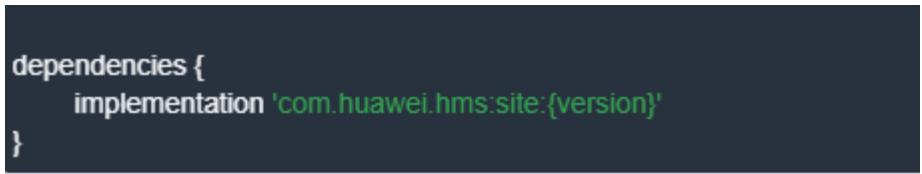

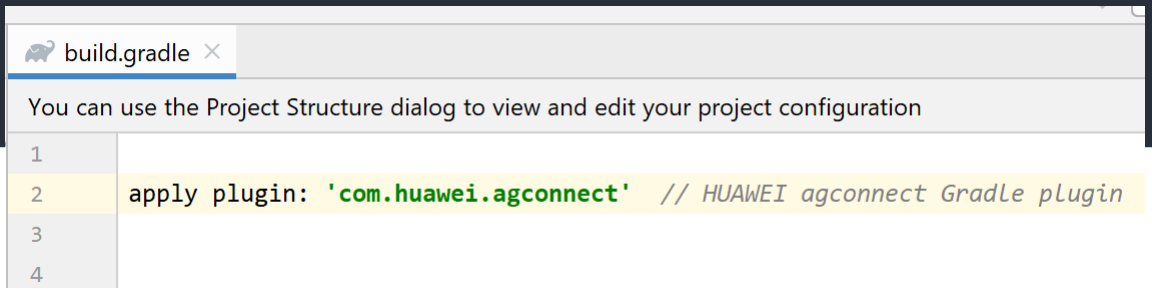

1) **Habilita** Site Kit en AGC

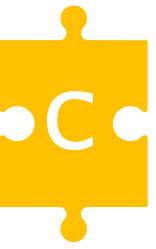

2) **Descarga** desde AGC y **AGREGA** a tu Proyecto el agconnect-services.json

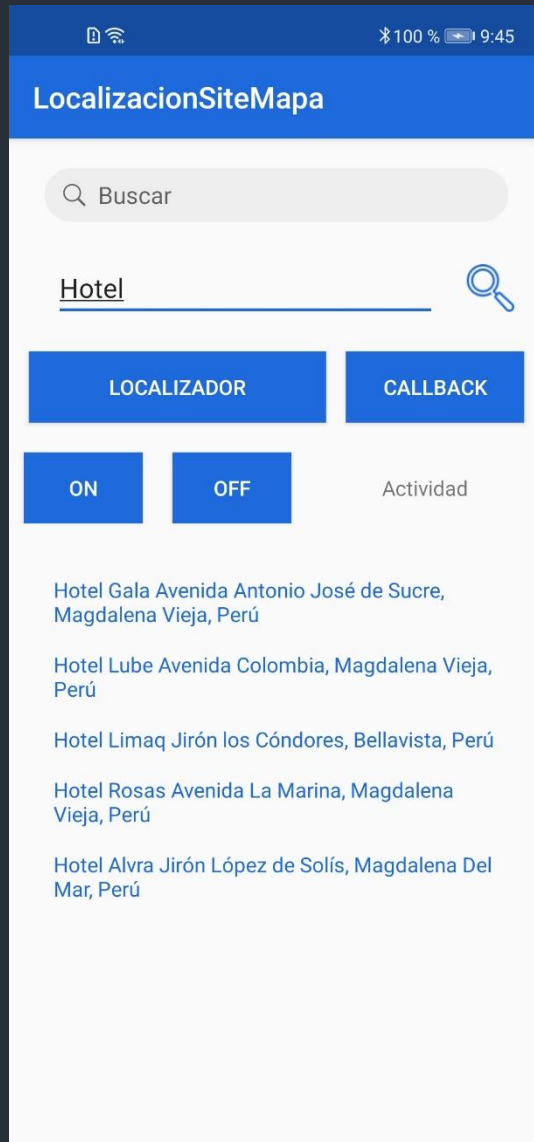

3) **AGREGA** dependencias y referencias en tu proyecto

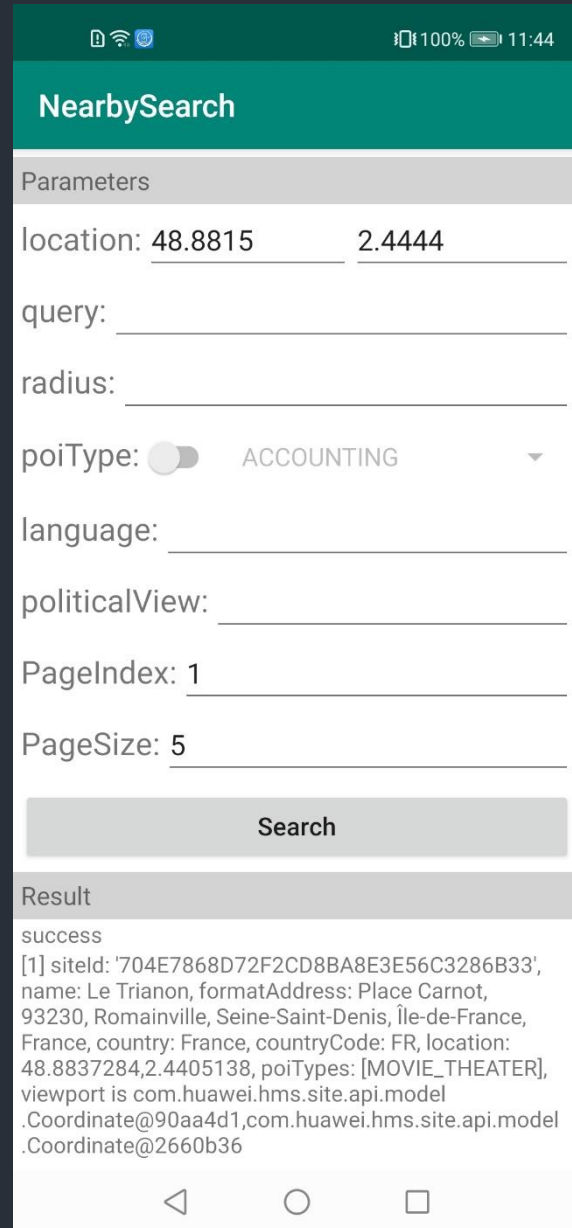

- Implementar SearchFragment
- Manejar la respuesta a través de un SearchResultListener.

....lets CODE!

The screenshot shows a mobile application interface for 'NearbySearch'. At the top, there's a green header with the title 'NearbySearch'. Below it, a section titled 'Parameters' contains several input fields: 'location' with values '48.8815' and '2.4444', 'query', 'radius', 'poiType' (with a toggle switch and 'ACCOUNTING' selected), 'language', 'politicalView', 'PageIndex' (set to 1), and 'PageSize' (set to 5). A 'Search' button is located below these fields. The 'Result' section shows a 'success' message and a JSON-like string representing a search result for 'Le Trianon' in France, including details like coordinates, address, and country.
